"Chrome" tanning was developed in France in the late 1800's, brought to commercial use in the US, then re-exported to the rest of the world. It is now employed in making over 95% of the world's leather, as it is far quicker (1 day) and less expensive than vegetable tanning.

History of Leather Tanning: Part 1 - Leather Built

Web and social media are a real treasure trove of information, but they often turn out to be unreliable, if not fake. Vegetable tanned leather is one of the most controversial topics: some people confuse it with a plant-based product (therefore "vegan"), or mistakenly compare it with chrome tanned leather, while others consider all tanning processes as equally pollutants.
