However, this pattern does not seem to sufficiently explain the case of hypertension and the 2017 ACC/AHA guidelines. Hypertension is indeed a major risk factor for CVD and death. Starting at values as low as 115 mm Hg for systolic blood pressure (SBP), higher blood pressure linearly increases the risk of CVD events.

A. A. High blood pressure should be treated earlier with lifestyle changes and in some patients with medication - at 130/80 mm Hg rather than 140/90 - based on new ACC and American Heart Association (AHA) guidelines for the detection, prevention, management and treatment of high blood pressure. The new guidelines - the first comprehensive set since 2003 - lower the definition of high blood pressure to account for complications that can occur at lower numbers and to allow for earlier ...

2017 ACC/AHA/AAPA/ABC/ACPM/AGS/APhA/ASH/ASPC/NMA/PCNA ...

In 2017, the American Heart Association and the American College of Cardiology released another set of hypertension guidelines that proposed new hypertension definitions, and advised stricter blood pressure control due to the mortality benefits seen from the SPRINT trial (published in 2015 after JNC 8) 3.

TUSK - Mobile - Hypertension: JNC- 8 (2014) vs AHA/ACC (2017)

The 2017 ACC/AHA guideline recommends treating SBP/DBP to <130/80 mm Hg for all adults taking antihypertensive medication. This is lower than the goal recommended by JNC7, with the exception of adults with diabetes or chronic kidney disease, where the treatment goal has not changed.
