## **Acceptable Risk in Biomedical Research: Research: European ...**

Essentially all guidelines and regulations require that biomedical research studies have an acceptable risk-benefit profile. However, these documents offer little concrete guidance for implementing this requirement and determining when it is satisfied. As a result, those charged with risk-benefit evaluations currently assess the risk-benefit profile of biomedical research studies in unsystematic ways, raising concern that some research participants are not being protected from excessive ...

Acceptable level of risk is used in a variety of fields, including environmental management, food safety and biomedical research e.g., [16,17,18]. This policy tool represents the highest level of risk that an entity is willing to accept, and is frequently set relative to the costs of implementing a risk-reduction policy.

## **Understanding Acceptable Level of Risk: Incorporating the ...**

The Council of Europe and the U.K. Medical Research Council appear to endorse this approach, stipulating that research is acceptable when "it is to be expected that [the research] will result, at the most, in a very slight and temporary negative impact on the health of the person concerned."<sup>12, 13</sup> Because this approach blocks research that poses any chance, no matter how low, of serious injury, it has the potential to block a good deal of pediatric research.
