Understanding Exponents. As we begin our study of monomials, you will need to learn and understand the use of exponents. So, let's begin by defining the term exponent. An exponent is a number (small and raised) that represents the "shortcut method" to showing how many times a number is multiplied by itself.

I suggest you read Fractional Exponents first, or this may not make sense. Anyway, the important idea is that: $x^{1/n}$ = The n-th Root of x. And so a fractional exponent like $4^{3/2}$ is really saying to do a cube (3) and a square root ($1/2$), in any order. Just remember from fractions that $m/n = m \times (1/n)$:
