The concept behind the development of BS 9999 and BS 7974 is that technical guidance on fire safety is provided at three different levels. This permits a design approach to be adopted that corresponds to the complexity of the building and to the degree of flexibility required. The three levels are as follows: a) General approach. This level is applicable to a majority of building work undertaken within the UK.

By taking a more holistic view to fire safety, BS 9999 allows compensatory measures to offset, e.g. travel distances and/ or total escape door width. In a worked example for a supermarket, by following ADB, maximum travel distances of 18 m for egress in a single direction and 45 m for escape in two directions, and a minimum aggregated exit width (after discounting the largest exit) of 7500 mm would need to be applied.

Fire safety - Approved Document B vs BS 9999 | NBS

With the enactment of the Regulatory Reform (Fire Safety) Order 2005, it is now the employer's responsibility to maintain their fire safety systems. BS 9999:2017 also states that: Arrangement's should be made for all fire dampers to be tested by a competent person on completion of the installation and at least annually, and to be repaired or replaced immediately if found to be faulty.
