While Perc and all its other daughter products are considered toxic, ethene is non-toxic. So, cleanup of Perc spills can be performed taking advantage of these naturally occurring bugs, but they aren't really found in very common places. The conditions present in the subsurface need to be studied carefully and a remediation plan needs to be devised that takes advantage of this complicated, naturally occurring process to help achieve cleanup objectives where spills of Perc have occurred.

What makes cleaning up perc spills so expensive?
