The human body improves with use (within limits), provided it is used in accordance with the principles of efficient human motion. The function of kinesiology in physical education, therefore, is to contribute not only to successful participation in various physical activities but also to the improvement of the human structure through the intelligent selection of activities and the efficient use of the body.

The characteristics and state of knowledge of bioelectric signals such as ECG, EEG, and EMG are initially discussed. This serves as the basis for exploration of the degree of scholastic coverage and understanding of the level of clinical acceptance of respective bioelectric signal subtypes during the last 60 or so years. The review further proceeds to discuss surface EMG (sEMG).
