EANM Dosimetry Committee Our goal is to promote and develop the use of dosimetry in Nuclear Medicine. Our vision is that radiation treatments from radiopharmaceuticals will be individually planned to optimize the absorbed doses delivered to target volumes, taking into account the absorbed doses delivered to non-target volumes and tissues.

A re-reading of the MIRD formalism guidelines is important as this document lists the procedure to be followed in thyroid dosimetry. Defining the sensitivity, calculating the S factors, estimating the cumulative activity and residence times and then calculating the dose are the different steps presented.
