isolated from urinary tract, respiratory tract, and bloodstream infections from intensive care unit patients between 2002 and 2008 in the United States.

Lab 12: Isolation and Identification of Enterobacteriaceae ...

Enterobacteriaceae (Lactose-fermenters): • Large family of gram-negative rods – • Occur as free-living in nature OR • As part of normal flora of colon of human and animals. Four metabolic characteristics: 1. Facultative anaerobic 2. Ferment glucose 3. Oxidase - negative 4. Nitrate - positive

Grouping on the basis of lactose fermentation:

Enterobacteriaceae (Lactose-fermenters)

Enterobacteriaceae family contains a large number of genera that are biochemically and genetically related to one another. Many of the traditional or familiar bacteria are found in this family e.g. Escherichia, Shigella, Salmonella, Enterobacter, Proteus, Yersinia etc. Common characteristics of family Enterobacteriaceae are:

Enterobacteriaceae Family: Common Characteristics - Learn ...

I just have a question about your old enterobacteriaceae chart vs the new one. I originally printed out the old chart, since that was the only one available, but have now noticed on the new chart that something is different. The old chart says E. sakazakii is lysine positive, but the new one says that E. sakazakii is lysine negative.

Microbiology | wordsology
