"Every seal, whether static or dynamic, must seal against at least two contacting surfaces," Parker says in its Fluid Power Seal Design Guide. "In static applications, both surfaces are non-moving relative to one another." When it comes to dynamic applications, at least one surface is in motion relative other sealing surfaces.

In the design shown, a double-acting power cylinder provides both the pumping and suction stroke to a ram, which is isolated from the primary fluid by multiple seals. Where very high pressures are created, it may be desirable to add an intermediate- pressure fluid, with good lubricating properties, between the primary and secondary fluid seals.
