Gulf of Mexico Origin, Waters, and Biota

The Gulf of Mexico is an ocean basin and a marginal sea of the Atlantic Ocean, largely surrounded by the North American continent. It is bounded on the northeast, north and northwest by the Gulf Coast of the United States, on the southwest and south by the Mexican states of Tamaulipas, Veracruz, Tabasco, Campeche, Yucatan, and Quintana Roo, and on the southeast by Cuba. The US states of Texas, Louisiana, Mississippi, Alabama, and Florida border the Gulf on the north, which are often referred to

Gulf of Mexico - Wikipedia

5) An important feature of the Gulf of Mexico is the Gulf Stream, which is a warm Atlantic current that begins in the region and flows north into the Atlantic Ocean. Because it is a warm current, sea surface temperatures in the Gulf of Mexico are normally also warm, which feeds Atlantic hurricanes and helps in giving them strength. Climate change that's warming waters further is also making them larger, as in increased intensity and amount of water.
