The enthalpy of vaporization (symbol ΔH_{vap}), also known as the (latent) heat of vaporization or heat of evaporation, is the amount of energy that must be added to a liquid substance to transform a quantity of that substance into a gas. The enthalpy of vaporization is a function of the pressure at which that transformation takes place. The enthalpy of vaporization is often quoted for the ...

The Heat Capacity and State Functions. When certain state functions (P , V , T) are held constant, the specific heat of the gas is affected. Below is the universal formula for a gas molecule when its pressure is held constant: $(c_p = c_v + R)$ When this formula is rearranged we get the heat capacity of the gas when its volume is held constant:

(1) The zeroth law of thermodynamics allows this definition to be used to measure the absolute or thermodynamic temperature of an arbitrary body of interest, by making the other heat reservoir have the same temperature as the body of interest. Kelvin's original work postulating absolute temperature was published in 1848. It was based on the work of Carnot, before the formulation of the first ...

Définition thermodynamique. En thermodynamique classique, l'entropie est une fonction d'état extensive (c'est-à-dire dépendante de la masse ou du volume de matière), introduite en 1865 [2] par Rudolf Clausius dans le cadre du deuxième principe de la thermodynamique, d'après les travaux de Sadi Carnot [3]. Clausius a montré que le rapport (où est la quantité de chaleur reçue par un ...
