Line 2: $5y = 5x + 15$; These two lines are exactly the same line. If you multiply line 1 by 5, you get the line 2. Otherwise, if you divide the line 2 by 5, you get line 1. Infinite Solutions Example.

Example: Show that the following system of equation has infinite solution: $2x + 5y = 10$ and $10x + 25y = 50$. Solution: Given system of the equations is $2x + 5y = 10$ and $10x + 25y = 50$

What's a Solution to a System of Linear Equations? If you have a system of equations that contains two equations with the same two unknown variables, then the solution to that system is the ordered pair that makes both equations true at the same time. Follow along as this tutorial uses an example to explain the solution to a system of equations!

Hence the given linear equation has Infinite solutions or the number of solutions is infinite. Example 2: Consider the equation $15(x + 9) = 24x + 9 - (9x - 126)$ Solving we have $15x + 144 = 24x + 9 - 9x + 126$ or $15x + 144 = 15x + 144$. Subtracting $15x$ from both sides. $15x - 15x + 144 = 15x - 15x$

If the variables disappear, and you get a statement that is always true, such as $0 = 0$ or $3 = 3$, then there are "infinite solutions", meaning, when graphed, the two equations would form the same line

If the variables disappear, and you get a statement that is never true, such as $0 = 5$ or $4 = 7$

So these are essentially the same constraints. And so you start to look at it a little bit confused, and you say, OK, I see why we got 0 equals 0. There's actually an infinite number of solutions. You pick any x and then the corresponding y for each of these could be a solution for either of these things. So there's an infinite number of solutions.

The given equations are consistent and dependent and have infinitely many solutions, if and only if, $(a_1 / a_2) = (b_1 / b_2) = (c_1 / c_2)$ Conditions for Infinite Solution. An equation can have infinitely many solutions when it should satisfy some conditions.

Well, then you have an infinite solutions. So with that as a little bit of a primer, let's try to tackle these three equations. So over here, let's see. Maybe we could subtract. If we want to get rid of this 2 here on the left hand side, we could subtract 2 from both sides.
