Apache Spark - Introduction - Tutorialspoint

Apache Spark is an open-source, distributed processing system used for big data workloads. It utilizes in-memory caching, and optimized query execution for fast analytic queries against data of any size. It provides development APIs in Java, Scala, Python and R, and supports code reuse across multiple workloads—batch processing, interactive queries, real-time analytics, machine learning, and graph processing.

open sourced in 2010, Spark has since become one of the largest OSS communities in big data, with over 200 contributors in 50+ organizations spark.apache.org “Organizations that are looking at big data challenges – including collection, ETL, storage, exploration and analytics – should consider Spark for its in-memory performance and

Intro to Apache Spark - Open Computing Facility

Apache Spark is a lightning fast cluster computing system. It provides the set of high-level API namely Java, Scala, Python, and R for application development. Apache Spark is a tool for speedily executing Spark Applications. Spark utilizes Hadoop in two different ways – one is for Storage and second is for Process handling.

Apache Spark Introduction for Beginners - KDnuggets

Spark is an Apache project advertised as “lightning fast cluster computing”. It has a thriving open-source community and is the most active Apache project at the moment. Spark provides a faster and more general data processing platform. Spark lets you run programs up to 100x faster in memory, or 10x faster on disk, than Hadoop.

By end of day, participants will be comfortable with the following:!

- open a Spark Shell!
- use of some ML algorithms!
- explore data sets loaded from HDFS, etc.!
- review Spark SQL, Spark Streaming, Shark!
- review advanced topics and BDAS projects!
- follow-up courses and certification!
- developer community resources, events, etc.!
- return to workplace and demo use of Spark!
