This list provides a simple impact factor, computing a ratio of the number of citations by the number of items in the series. Citation counts are adjusted to exclude citations from the same series. These computations are experimental and based on the citation analysis provided by the CitEc project, which uses data from items listed in RePEc. Only series or journals with 50 or more items are ranked.

Journal ranking is widely used in academic circles in the evaluation of an academic journal's impact and quality. Journal rankings are intended to reflect the place of a journal within its field, the relative difficulty of being published in that journal, and the prestige associated with it. They have been introduced as official research evaluation tools in several countries.
