Instead step-by-step solutions of composite material mechanics problems are examined in detail using MATLAB. All the problems in the book assume linear elastic behavior in structural mechanics. The emphasis is not on mass computations or programming, but rather on learning the composite material mechanics computations and understanding of the underlying concepts.

Calculate the maximum value of fiber volume ratio for rectangular packing. Take the half of center to center spacing between two fibers equal to the value of the radius of the fiber. Consider the value of radius of fiber,  $r$  as equal to the variables half of the center to center spacing between the fibers and in directions 3 and 2 respectively.
