Neonatal resuscitation guidelines

Neonatal resuscitation guidelines - PubMed

The standard approach to resuscitation is to use 100% oxygen. Some clinicians may begin resuscitation with an oxygen concentration of less than 100%, and some may start with no supplementary oxygen (ie, room air). There is evidence that employing either of these practices during resuscitation of neonates is reasonable.

The Neonatal Resuscitation ILCOR and Guidelines Task Forces continue to support use of a 3:1 ratio of compressions to ventilation, with 90 compressions and 30 breaths to achieve approximately 120 events per minute to maximize ventilation at an achievable rate 173 - 178 (Class IIa, LOE C-LD). Thus, each event will be allotted approximately a half of a second, with exhalation occurring during the first compression after each ventilation.

who require resuscitation at birth. Oxygen Use • Resuscitation of newborns greater than or equal to 35 weeks' gestation begins with 21% oxygen (room air). Resuscitation of newborns less than 35 weeks' gestation begins with 21% to 30% oxygen. • If a baby is breathing but oxygen saturation (SpO₂) is not within

Summary AAP/AHA

Maintaining an open airway. If the infant is not breathing, aerating the lungs with inflation breaths. Continue ventilating apnoeic infants until respiration is established. If the heart remains less than 60 min⁻¹ after 5 effective inflation breaths and 30 seconds of effective ventilation, start chest compressions.

The need for clinical guidelines on basic newborn resuscitation, suitable for settings with limited resources, is universally recognized. WHO had responded to this need by developing guidelines for this purpose that are contained in the document Basic newborn resuscitation: a practical guide. As this document is over a decade old, a process to ...

WHO | Guidelines on basic newborn resuscitation

Provision of healthcare services to this group of infants takes up a considerable amount of neonatal resources.²⁴ Current neonatal resuscitation guidelines do not take into account the possibility of significant neonatal respiratory distress occurring beyond the delivery room from exposure to maternal epidural analgesia.²⁵ The positive association as demonstrated in this study, if validated in further studies, would potentially impact clinical practice in terms of consideration for use of ...
