1. Energy Efficient Heating. There are two types of radiant floor heating, electric and water-based systems. Both provide heating in a room from the floor up for consistent, efficient warmth. Warm water systems run hot water through pipes to create heat, whereas electric underfloor heating heats wiring beneath the floor to generate heat.

I had a Munchkin boiler installed last year with 3 zone valves. Only one zone was initially hooked up to slant fin baseboards on my main floor. This was plumbed with 3/4-inch wirsbo pex. The other 2 zones were for a future finished basement and a future 2nd floor addition. The 2nd floor has been framed and I'm ready to add the zone.

Wright was a pioneer in radiant floor heating, using it in many of his projects such as the Johnson Wax Building (1937) and the Jacobs Residence. Following the end of World War II, the U.S. had its first large-scale multi-building project heated with radiant systems realized with copper pipes embedded in a concrete slab in historic Levittown.
