Tire impressions reflect the tread design and dimensional features of the individual tires on a vehicle. If properly collected the tire tread impression is extremely valuable in proving a suspect vehicle was present at a crime scene. Tire track evidence can: Positively match a suspect vehicle; Determine the wheelbase or turning diameter of a vehicle

New tires typically start with a tread depth of 10/32" to 12/32", with some off-road tires topping 15/32". New tire tread depth is the measurement typically published by tire manufacturers, but it's not the same as usable tire tread depth. Most states and tire manufacturers consider tires to be bald when one or more of their grooves are worn down to 2/32". So, if you start with a new tire tread depth of 10/32", the actual usable tread depth is 8/32".

Tire Tracks. Tire track impressions are classified as pattern evidence because the tire track impressions leave behind a unique pattern. Just like shoe impressions can help narrow down, the brand, style and size, Tire tracks have the ability to do the same thing. Tire track impressions can attempt to be matched through searchable data bases that the manufacturer, the FBI or another agency has put together.

The tread of a tire or track refers to the rubber on its circumference that makes contact with the road or the ground. As tires are used, the tread is worn off, limiting its effectiveness in providing traction. A worn tire can often be retreaded. The word tread is often used casually to refer to the pattern of grooves molded into the rubber, but those grooves are correctly called the tread pattern, or simply the pattern. The grooves are not the tread, they are in the tread. This distinction is e

The tread on your tires should never fall below 1/16 of an inch (1.6 millimeters) in depth. If you regularly drive on slick, wet surfaces, you are better off with twice that much. There's a simple trick that will give you a rough idea of how much tread depth you have left and it won't cost you more than a penny.
