For the patient in case 1, because of his age, clinical history, and lack of other clear causes, the most appropriate course of action is to obtain blood urea nitrogen and creatinine levels ...

Urinalysis: Case Presentations for the Primary Care ...

However, the urinalysis results from our case study indicated a vast presence of blood in the subject's urine. This is called hematuria and, as explained earlier, it is associated with kidney damage. In normal cases, nitrites aren't detected in urine. Urinary nitrates are oxidized to nitrites by bacteria in urine.

Kidney Case Study

The urinalysis results showed that patient 1 had high amounts of glucose and high specific gravity. Considering that high specific gravity can be caused by sugar, or glucose, in the urine. Usually there is no glucose in the urine unless glucose levels become very high in the bloodstream.
