...

We can set up the limits according to some experience with certain machines and there are also for example ISO 10816-3 standards for those limit values. Low Frequency Vibrations All mechanical faults which are related to the speed of the machine such as unbalance, misalignment and mechanical looseness are considered as low frequency vibrations.

Vibration Standard Iso 10816-3 - beachmj

ISO 10816-3 defines four groups of machines, ranked according to size, base and purpose. It separates the working conditions into four zones: Zone A Green: vibration values from machines just put into operation; Zone B Yellow: continuous operation without any restrictions; Zone C Orange: condition is acceptable only for a limited period of time

This is in contrast to other standards dealing with vibration measurements (e.g. ISO 10816-1, ISO 10816-3 and ISO 13709
